REASONS FOR ALLOWANCE

The following is an Examiner's Statement of Reasons for Allowance: the combination of elements as claimed is deemed to be directed to an unobvious improvement over the prior art as shown by Evans or GB 1343377 Japan 06002613 and Schieber. GB 1343377 discloses a piston comprising a cylindrical aluminum body (3) having a face forming a head, pin bosses with pin bores and a skirt elements; a stepped ring element (12) in a radially outer edge of the piston head, forming a ring shaped cooling channel (15) with the body, a first step (part of 13) on an "upper" side of the cooling channel, an inside thread (9) on a lower side of the cooling channel, between the cooling channel and a lower face (12sub1), and a second step (11) between the inside thread and the lower face. Evans shows a piston similar to GB 1343377. Japan 06002613 teaches that a ring element can be made of Ni resist cast iron. Schieber teaches that a ring element can have a thinned wall region between an inside thread and a stepped portion. This improvement comprises that the second step is between the inside thread and the cooling channel.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, preferably **accompanies** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
